

# Symphony IRI Group

Insight. Innovation.

# Welcome to Mintel GNPD IRIS

GNPD IRIS is a web-based trend identification and innovation tool, which monitors new product launches and tracks its sales success using IRI EPOS data.

IRI sales data is available on products launched from January 2005. It spans the entire 25 I sub-categories of Mintel GNPD and focuses on seven specific countries: France, Germany, Italy, Netherlands, Spain, UK and USA.

Sales data information for a product is recorded from launch date to 104 weeks, when launch date equals when a product achieves 1% distribution.

# **Performance Measures**

Mintel GNPD IRIS provides sales information in both numerical and graphical forms.

Country/ies from which products* are sourced	Sales	Distribution	Performance (aka Sales Rate,Velocity)
US	\$	ACV Weighted Distribution	Dollars per \$m ACV
UK	£	ACV Weighted Distribution	Dollars per \$m ACV
Germany	€	Percentage of Stores Selling	Euros per Store
Netherlands	€	Percentage of Stores Selling	Euros per Store
France	€	ACV Weighted Distribution	Euros per \$m ACV
Italy	€	ACV Weighted Distribution	Euros per \$m ACV
Spain	€	ACV Weighted Distribution	Euros per \$m ACV

\*\* Products refers to individual items or items that are part of benchmarks.

#### Other information provided includes:

Number of units sold over the total time period.

Average weekly sales of the product.

GNPD IRIS product records also record pack size variants.

A tick or a cross indicates whether the product is still selling. If the product has a complete data set of two years, the number 104 will be shown, highlighting that it has been on the shelf for 104 weeks.

Symphony IRI Group Insight. Innovation.

Impact.

Mintel GNPD IRIS Graphs

Every IRIS product record has a yellow data barrel dividing two years into four separate time

periods. Information can be viewed looking at Weeks 1-13, Weeks I-24, Weeks I-52 (the first year on the shelf), and Weeks 1-104 (two years on the shelf - the complete data set).

#### Select the barrel to display the graphs for that time period.

Weeks I-I3. The first 13 weeks worth of sales data is reported as a weekly measure. After that the data is reported in periods of 'quad weeks'. A Quad Week represents a four-week block of data.

The Performance graph will only ever show the last 26 weeks of information in single week format.

This provides a real-time snapshot of how this product is selling.

#### Use Unit Measures gives you the ability to switch between unit measures and value measures.

Data and graphs can be downloaded into Microsoft Excel or Word from the product record.

Using the Analysis tab in Mintel GNPD IRIS, information on the top sellers in terms of average weekly sales and sales rate can be easily viewed. The analysis will highlight the

variant, pack size and average sales achieved (either weekly or per store).

Click on the product to proceed to the product record and view sales data.

# Benchmarking

A **benchmark** is a user-defined group of products. This competitive set provides the user with an average of how these products perform. All members of a benchmark are time aligned from the product launch date.

A benchmark can be created in four ways:

- Through a GNPD IRIS search
- Fast Benchmark options within an individual product record
- Plan-it graphs
- Hopper Folders.

## Benchmarking – GNPD IRIS Search

A GNPD IRIS benchmark can be created by selecting search criteria from the Search page, running that search and then setting it as a benchmark. For example a search on drinking yogurt in Spain can be run and then using the free text box at the top of the results page, it can be set as a benchmark.

If no country is specified in the search, GNPD IRIS will ask the user if they wish to create individual benchmarks for each country.

#### Benchmarking - Fast Benchmarks

Fast Benchmarks appear under beneath the three graphs in a product record.

The fast benchmarks enable you to make benchmarks using criteria relevant to the product record you are viewing - including flavours, claims and subcategories - for quick comparison.

Fast Benchmarks	
Compare the sales of this product to others like it.	Fast
Subcategory ☑ Cold Cereals	way imn
Claims	the
All Natural Low/No/Reduced Cholesterol Low/No/Reduced Fat Low/No/Reduced Transfat Wholegrain Functional - Cardiovascular Ethical - Environmentally Friendly Package	ben the The app
Flavours	
□ Honey □ Nut □ Chocolate (unspecified)	
COMPARE SALES >	

Benchmarks is an ideal to benchmark as it has nediate results – click box with the desired nchmark, then click on compare sales button. e benchmark will then bear in the graph.

# Benchmarking - Plan-IT

Benchmarks can be made from a Plan-IT graph. Once a graph or table is created, an option to make a fast benchmark will be available at the bottom of the screen.

Plan-IT is a guick way to make multiple benchmarks. Simply provide a name for the benchmark in the text box and click on the create benchmark button.

Description	:			
Access:	Me or	nly		
Folder:				SAVE >
Date create	ed: 1 Ju	ne 2010		
Owner: avir	nce@m	intel.com		
Actions:	Share	Rename	Delete	Benchmark

## Benchmarking - Hopper

Lastly, Benchmarks can be made from a Hopper folder. Once desired items are placed in a Hopper, there is the option to Save Benchmark from this Hopper. Here Mintel GNPD IRIS will collate all products in the hopper and produce the average level of sales, distribution and performance for those specific products.

## Comparing Products and Benchmarks

Compare information in the following ways:

- Benchmark versus benchmark
- Benchmark versus product

In a product record, the option of **Product comparison** is available. To compare one product to another click on the USE button - this will save the sales data.

Product versus product.

You can overlay benchmarks on benchmarks from the My IRIS Benchmarks page.

Alternatively if you wish to compare a product record to a benchmark(s) OR to another product(s) then retrieve the record you 'd like to compare, select the time period you'd like to graph, and then choose the benchmarks/comparisons you'd like to use. Holding down CTRL will mean you can multi-select benchmarks/comparisons.

Product Variant Size Weeks on Date found on shelf Cumulative Average weekly sales Still Product shelf Selling Comparisons 13.20 30 Mar 2009 Honey & Nut 59 \$67,964 \$1,152 30 Mar 2009 \$118,411 \$2,007 Chocolate Crisp 13.20 59 USE > 59 \$186.375 \$3,159 Overall **Benchmarks and Product Comparisons** Ready-made Meals Ready-made Pasta Product Comparisons Jordans: Jordans - Tropical - 500.00 g (France) REDRAW GRAPH > NB: All members of a benchmark are time aligned from product launch date, and the resulting data displayed are timeframe specified.
